Fabrication of Metallic Micro-/Nano-Composite Materials for Environmental Applications

Guest Editors:

Message from the Guest Editors

Dr. Rui Zhou

Dear Colleagues,

Prof. Dr. Hongjun Liu

Dear Colleagues

Prof. Dr. Gang Han

We warmly invite you to submit your contributions, in the form of both original research articles and review papers, which will inspire research towards the next generation of fabricating multifunctional composite materials for environmental applications. Potential topics include, but are not limited to:

Deadline for manuscript submissions:

closed (20 December 2023)

 Laser-assisted or chemical synthesis of catalytic nanoparticles, the surface science of nanomaterials, and surface effects at nanoscale

and applications;

• Laser surface treatment or chemical synthesis of filtration membrane surface for separation, surface

engineering, and functionalization:

 Physical and chemical deposition of nanostructured coatings for photocatalysis, piezocatalysis or piezo-photocatalysis, and functional surfaces and coatings;

- Antimicrobial and antifouling metallic coatings/filters for water purifications, electrochemistry at surfaces, and corrosion protection strategies;
- Theories and simulations analyzing the kinetics and mechanisms of fundamental processes during the growth of nanostructured materials on filter support, and thermophysical aspects of surfaces and interfaces

pecialsue

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. Coatings is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. Coatings publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
