2. Adjunct Research Associate, Skin Cancer Research Unit, College of Public Health, Medical and Veterinary Sciences, James Cook University, Townsville, QLD, Australia

Message from the Guest Editors

Dear Colleagues,

The incidence of skin cancer continues to rise globally. Estimates suggest that this important public health problem, which has already reached epidemic proportions in Australia, New Zealand, the U.S.A., and some European countries, will continue to increase steadily in moderately to highly sun-exposed, sun-sensitive populations, leading to further increases on a global scale.

We encourage submissions that provide insights into primary, secondary, or tertiary prevention. This Special Issue invites research on all aspects of skin cancer prevention in a broader sense. Specifically, outcomes of translating clinical observations to sun-safety interventions and population-based observations to the clinic, and RCTs examining the effectiveness of interventions in changing (or failing to change) behaviour are all welcome.

Generous discounts on the usual publication processing fees will be available to early contributors to this Special Issue upon request Via simone.harrison@jcu.edu.au.

We look forward to receiving your contributions.

Deadline for manuscript submissions:
