Message from the Collection Editors

Dear Colleagues,

This Topical Collection invites critical reviews, original research articles and other formats with comprehensive theoretical and experimental details focused on all aspects of chirality involved in drugs and drug candidates. This Topical Collection has the broad goal of illustrating recent and future trends in the development of successful chiral drugs and the search for new promising chiral drug candidates. Topics include the discovery, design and development of new chiral leads as well as synthetic and natural chiral drugs; chiral recognition studies; enantioselective synthesis; enantiomeric resolution; chiral drug analysis; stereochemical elucidation; and enantioselective studies on drug and drug candidate pharmacodynamics, pharmacokinetics, toxicity, and environment.
