Message from the Guest Editor

Dear Colleagues,

Restorative dental material behavior in the oral cavity is often affected by numerous factors that can lead to early failure or dissatisfaction of the patient. Dental material behavior is influenced by the unique combination of an elaborate oral environment and functionally demanding occlusal loads, which make it one of the most challenging outcomes to evaluate. Continuous changes in the oral environment may have a negative impact on the performance of restorative dental materials, which is mainly related to biodegradation and deteriorate. Chemical degradation depends on an acidic diet or the softening effect of food-simulating liquids. The effects of chemical degradation usually lead to surface softening and roughening, which can decrease the long-term durability of the restorations.

Message from the Editor-in-Chief

The *Dentistry Journal* (ISSN 2304-6767) is an official, peer-reviewed publication of MDPI, which transmits original papers as well as review articles from the entire field of dentistry to the scientific community. The *Dentistry Journal* supports scientific innovations, and clinical and experimental research within the whole field of dentistry and its related areas. The *Dentistry Journal* in particular supports interdisciplinary and translational studies. The *Dentistry Journal* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **ESCI (Web of Science)**, **PubMed**, **PMC**, and **other databases**.

Journal Rank: CiteScore - Q2 (*General Dentistry*)
