Message from the Guest Editors

Dear Colleagues,

Sepsis is a life-threatening organ dysfunction caused by a dysregulated host response to infection. If not recognized and managed promptly, it can deteriorate rapidly, leading to shock and death. It is a global emergency worsened by the spread of multi-resistant bacteria. Furthermore, the extension of life expectancy has exponentially increased the number of patients with multi-morbidity and fragility, particularly those susceptible to sepsis. Although research has clarified many aspects of the disorder, much remains to be understood.

This Special Issue aims to provide new insights into several key points, including the following:

- (a) Prevention programs including hygiene measures and vaccination;
- (b) New biomarkers or other tools to improve diagnosis;
- (c) Treatment strategies, including new antimicrobial therapies, the role of immunomodulators and new drugs that can counteract endothelial dysfunction and alterations to macro- and micro-circulation, which are typical of sepsis.

We look forward to receiving your contributions.

Message from the Editor-in-Chief

You are cordially invited to submit research articles, short communications, comprehensive reviews, case reports or interesting images for consideration and publication in *Diagnostics* (ISSN 2075-4418). *Diagnostics* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [Embase](#), [Inspec](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Medicine, General & Internal*)
