Message from the Guest Editor

Dear Colleagues,

Recent advances in neuroimaging technologies, artificial intelligence and emergence of novel imaging biomarkers set the groundwork for the translation of quantitative and emerging imaging techniques to clinical practice to inform diagnosis, treatment planning, disease monitoring, prognostication, and clinical trial design. As a natural progression, many of the new technologies can inform treatment decisions and improve outcome prediction in patients with cerebrovascular disease. In this issue, we will cover the most recent advances in cerebrovascular imaging and interventions.
