Message from the Guest Editor

Dear Colleagues,

Attention Deficit/Hyperactivity Disorder (ADHD) is a neurodevelopmental disorder affecting 3–7% of school-age children and affects about 5% of adults. While childhood ADHD is expressed by inattention, impulsive and hyperactive behaviour, most adults with ADHD show few externalizing symptoms and show attentional deficits that manifest as daily life difficulties in organization, time management, planning and task achievement. The recent development of dynamic EEG (electroencephalograph) has allowed to decipher oscillatory alterations in ADHD. The use of high-density EEG made possible the identification of brain generators involved in the neuronal processes related to perception, attention, decision and action. In order to better understand the origin of these neuronal alterations, it is necessary to develop new experimental paradigms and do not forget the fact that very early phenomena are taken into account in the processing of information. The emotional factors and the messages conveyed by the body should also be taken into account in order to consider new therapies based on the plasticity of neuronal oscillations.

Message from the Editor-in-Chief

Diseases is an international, peer-reviewed, open access, multidisciplinary journal that focuses on the latest outstanding research concerning diseases and conditions. Research articles, reviews, and other contents are released on the Internet immediately after acceptance. This journal aims to cover international conferences and symposia as new targets.

Diseases is increasingly gaining acceptance and visibility within scholars, and after only a few years of life, *Diseases* is now also covering specific topics with dedicated special issues. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed within Scopus, ESCI (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.8 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2023).
