Advances in Supercritical CO₂ Power Cycle Applications

Guest Editor:

Dr. Seongmin Son

1. Department of Smart Plant Engineering, Kyungpook National University, Sangju 37224, Republic of Korea

2. Department of Convergence & Fusion System Engineering, Kyungpook National University, Sangju 37224, Republic of Korea

Deadline for manuscript submissions:

31 May 2024

Message from the Guest Editor

The behaviour of nearly critical fluids, the physical singularity of matter, is fascinating and of interest to the engineering community. Power generation using supercritical CO₂ technology is attracting attention as an innovation that can contribute to the global energy crisis by making a more efficient system. However, supercritical CO₂ systems that actively exploit the rapid changes in properties near the criticality are still largely unexplored and require active research and development.

This Special Issue aims to present and disseminate the most recent advances related to the theory, design, modelling, application, control, and condition monitoring of all types of near-critical CO₂ power conversion system.

The topics of interest for publication include, but are not limited to:

- All aspects of supercritical CO₂ systems;
- Novel applications of near-critical CO₂ systems;
- Control logics for supercritical CO₂ systems;
- Operation and maintenance technologies for supercritical CO₂ systems;
- Advanced modelling approaches;
- Optimal design methodologies;
- Numerical analysis methodologies.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
