Computational Fluid Dynamics (CFD) Study for Heat Transfer

Guest Editors:

Dr. Jingying Wang

School of Energy and Power
Engineering, Shandong
University, Jinan 250061, China

Dr. Kuang C. Lin

Department of Engineering &
System Science, National Tsing
Hua University, No. 101, Section
2, Kuang-Fu Road, Hsinchu
30013, Taiwan

Deadline for manuscript
submissions:

18 September 2024

Message from the Guest Editors

Dear Colleagues,

Heat transfer coupling with fluid flow plays a crucial role in many theoretical and practical applications, such as differential equations, combustion, aerospace, automobiles, refrigeration, propulsion, heat exchangers, and nuclear engineering. Over the decades, computational fluid dynamics (CFD) has been successfully used to solve various problems of conjugate heat transfer and fluid flow on computers, and it has gradually developed into a time-saving and low-cost technique with high fidelity. Particularly, CFD combined with machine learning or artificial intelligence (AI) shows a promising and strong potential of simulating the processes of heat and mass transfer.

This Special Issue aims to feature original research and review articles on the most recent advances in methods, models, and applications of CFD for studying any heat transfer phenomena, and experimental results that support relevant CFD simulations are also acceptable.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
