Energy Efficient Supply Chains

Guest Editors:

Dr. Charisios Achillas

Department of Supply Chain Management, International Hellenic University, 60100 Katerini, Greece

Prof. Dr. Dionysis Bochtis

Institute for Bio-Economy and Agri-Technology (iBO), Centre for Research and Technology-Hellas (CERTH), 38333 Volos, Greece

Dr. Dimitris Aidonis

Department of Logistics, International Hellenic University, Nea Moudania, Greece

Deadline for manuscript submissions:

closed (30 September 2021)

Message from the Guest Editors

Dear Colleagues,

In recent decades, global supply chains are becoming increasingly responsible for energy consumption and carbon output due to manufacturing, logistics operations (transportation of goods and warehousing), and industrial product use as well as their end-of-life management. In this context, there is an urgent demand for energy-efficient supply chains which aim towards minimization in the use of materials, energy consumption, emissions of greenhouse gases or other pollutants, etc., in procurement, production, and distribution.

This Special Issue entitled “Energy-Efficient Supply Chains”, seeks to contribute to the energy efficiency agenda through boosting the performance efficiency of supply chain management and supporting the decision-making process of stakeholders via enhanced scientific and multidisciplinary knowledge. To that end, we invite papers on innovative technological developments in the field, reviews, case studies, or pilot studies that demonstrate near-to-market solutions, analyses as well as assessments, and multidisciplinary studies which are relevant to energy efficiency within the area of supply chain management.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
