Theory and Applications of Thermoelectric Materials and Devices

Guest Editors:

Dr. Zinovi Dashevsky

Department of Materials
Engineering, Ben-Gurion
University of the Negev, Be'er
Sheva, Israel

Dr. Lyudmyla Vikhor

Institute of Thermoelectricity of
the National Academy of
Sciences and Ministry of
Education and Science of
Ukraine, Chernivtsi, Ukraine

Deadline for manuscript
submissions:

closed (13 October 2023)

Message from the Guest Editors

The development and wide application of thermoelectric generation as a user-friendly, direct energy conversion technology are limited by two main factors: the relatively low conversion efficiency of thermoelectric generators (TEGs) and the limited availability of thermoelectric materials for large-scale production of high-performance TEGs for industrial applications. Thermoelectricity could be a future leader in waste heat recovery, with applications in two main domains. The first deals with the use of heat emitted from a radioisotope to supply electricity to various devices. Space exploration is the only area for which the application of thermoelectricity has been successful. In the second domain, a natural heat source is utilized for producing electricity; an example of this is seen in gas thermoelectric generators (TEGs), which are widely used for the cathodic defense of gas tube lines (in the northern areas of Russia, Canada, USA) and operate as autonomic energy stations.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
