Advanced Technologies for Sustainable Bio-Fuels Production

Guest Editors:

Dr. Panagiota Tsafraikidou

Department of Food Science and Technology, School of Agriculture, Faculty of Environment, Aristotle University of Thessaloniki, 54124 Thessaloniki, Greece

Dr. Konstantina Tsigkou

Department of Chemical Engineering, University of Patras, 1 Karatheodori Str., University Campus, 26504 Patras, Greece

Deadline for manuscript submissions:

closed (30 April 2023)

Message from the Guest Editors

Both the negative global warming impact and environmental pollution due to fossil fuels have led the modern society to find alternatives to conventional fuels, such as the renewable energy sources. More specifically, biofuels derived from renewable biomass (lignocellulosic biomass or organic waste and wastewater streams such as agricultural, agro-industrial, or municipal) are considered as one of the most promising renewable energy sources. Such resources are characterized by high abundance while they are CO₂ neutral. However, an efficient, realistic and affordable replacement of fossil fuels with the renewable ones demand not only competitive costs but also quantities, which will require advancement and improvement of their production technologies. In terms of circular economy and sustainable processes implementation, biological, biochemical and thermochemical techniques are able to transform biomass into valuable biofuels.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
