Characterization of Unconventional Petroleum Reservoirs

Guest Editors:

Dr. R. Marc Bustin

Department of Earth and Ocean Sciences, University of British Columbia, Vancouver, BC V6T 1Z4, Canada

Dr. Gareth Chalmers

School of Science, Technology and Engineering, University of the Sunshine Coast, Sippy Downs, QLD 4556, Australia

Deadline for manuscript submissions:

closed (20 February 2022)

Message from the Guest Editors

Unconventional petroleum resources, shale gas/oil, coal seam gas and tight gas have become significant contributors to global hydrocarbon production in the past two decades and are projected to continue to grow in importance for at least the next 30 years. Unconventional hydrocarbon production is complex due to the myriad of geological processes that control reservoir characteristics. These processes include primary depositional environment, diagenesis (mineral and organic matter), and fluid migration and hydrocarbon retention, all of which are, in turn, impacted by the structural and tectonic evolution of the reservoir and its associated strata.

Our goal for this Special Issue is to compile a collection of papers that explore the importance of reservoir characterisation on the development of unconventional resources including shale gas/shale oil, coal seam gas, and tight gas plays. Research that applies cutting-edge technologies and novel techniques to investigate unconventional reservoir properties, detailed case studies, and holistic overviews are of interest.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
