## Marine Biomass for Biofuels and Biochemicals Production

Guest Editors:

**Dr. Umakanta Jena**

Renewable Energy Center, Desert  
Research Institute (DRI), Reno, NV  
89512, USA

**Dr. Ravikrishnan Vinu**

Department of Chemical  
Engineering, Indian Institute of  
Technology Madras, Chennai  
600036, India

Deadline for manuscript  
submissions:

**closed (1 December 2021)**

### Message from the Guest Editors

Marine biomass has tremendous potential for tapping the immense solar energy into resources including human foods, cosmetics, fertilizers, fuels and chemicals. Selective separation of high-value products and fuels is a major challenge. Thermochemical and biochemical conversion methods have been well tested for biomass systems and include: 1) reports on laboratory-scale pyrolysis, gasification, torrefaction, and combustion of algae and lignocellulosic feedstocks; 2) demonstration of commercial-scale anaerobic digestion and fermentation mature technologies; 3) recent study of hydrothermal conversion of wet, whole biomass as an alternative method; and 4) emergence of microwave technologies and other ways of extraction of proteins and high-value products. While a single method may not be effective, a combination of technologies and their integration will be the way forward to using marine biomass. The present issue aims to include the recent innovations in marine biomass application and will focus on topics including biomass harvesting, fractionation/extraction, and upgrading (conversion) into fuels and coproducts, and systems analyses such as life cycle and technoeconomic.

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
