Message from the Guest Editor

Dear Colleagues,

This Special Issue titled "Advances in Structural Analysis and Rehabilitation for Existing Structures" is a timely and important addition to the field of civil engineering. This Special Issue presents the latest research and developments in the area of structural analysis and rehabilitation of existing structures, which is a critical and growing area of focus for the engineering community. The issue covers a broad range of topics related to the assessment, repair, strengthening, and maintenance of existing structures and includes contributions from leading researchers and practitioners from around the world. The papers in this issue will be of interest to researchers, engineers, and practitioners involved in the design, assessment, and rehabilitation of existing structures and will provide valuable insights and knowledge to help to address the challenges and opportunities in this important and growing field.
