Sciences, Universidade Federal
do Sul da Bahia, Teixeira de
Freitas 41820-500, Brazil

Deadline for manuscript
submissions:

31 August 2024

Message from the Guest Editors

Modeling and predicting epidemic spreading in human societies is a challenge connecting epidemiology and sociology. The complexity arises in many forms: individuals are known to interact in a complex network of connections; the flux and the nature of the information among the individuals affect their attitude towards prophylactic and/or non-pharmaceutical measures, etc. In addition, complexity also emerges from the individuals' response to the environment, which can be based on their risk perception, optimistic bias, social condition or even political persuasion.

On the other hand, nowadays, several technological advances, such as contact-tracing apps and [GPS](#), can help to identify and follow epidemics' spatial and temporal evolutions. This can lead to better parameter fitting and to optimize control strategies.

Therefore, considering the recent advances in the fields of epidemic modeling and sociophysics, this Special Issue aims to collect new methods, models, and data-driven studies that contribute to a better understanding of the epidemic spreading in human societies.

Special Issue

entropy

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University
at Albany, 1400 Washington
Avenue, Albany, NY 12222, USA

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
