Message from the Guest Editor

Markov Chain Monte Carlo (MCMC) algorithms are now routinely used in Bayesian statistics for sampling from the posterior distribution of all unknown quantities in a model, for which direct sampling would be difficult. There are many situations, however, where it is impractical or even impossible to draw the samples, e.g., with massive datasets or in the case for intractable likelihood models. Further, the efficiency of MCMC depends on how the underlying geometry of the problem is taken into account when designing the transition kernel, especially for target distributions with complex dependence structures. In this case, a naive implementation may suffer from a very slow exploration of the target distribution.

This Special Issue invites the submission of papers that aim at advancing computational developments in Bayesian statistics, with particular emphasis on Markov chain Monte Carlo methods and their variants. Papers are expected to contribute to the design of efficient algorithms or improve existing ones, in challenging applications. Therefore, the Special Issue welcomes both novel methodological and application-focused contributions to the area.

entropy

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University
at Albany, 1400 Washington
Avenue, Albany, NY 12222, USA

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
