Message from the Guest Editor

Dear Colleagues,

Proposed 101 years ago and initially intended to describe magnetic ordering, the Ising model turned out to be one of the most important models of statistical mechanics. Indeed, the idea of a lattice model with nodes being discrete variables called spins, which prefer to be similarly oriented, turned out to be tremendously prolific and influential. In addition to describing various magnetic systems, the Ising model was used to analyse alloys, liquid helium mixtures, glasses, critical behavior in various gases, or protein folding. In recent years, it is often used to describe systems much distant from the realm of physics. As a result, Ising-like models find myriads of applications in diverse research fields such as opinion formation, social network analysis, econophysics, but also computer science, computational biology or neuroscience. The objective of this special issue is to collect papers that describe recent results on Ising model or introduce some original techniques for its analysis. Papers that explore some novel areas of applications of Ising models are also welcome.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
