# **Information Theory in Biomedical Data Mining**

Guest Editor:

### Prof. Dr. Małgorzata Syczewska

Department of Rehabilitation, Children's Memorial Health Institute, 04-730 Warszawa, Poland

Deadline for manuscript submissions:

closed (20 March 2022)

## Message from the Guest Editor

The rapid development of medicine and biomedical sciences provides us with an increasing volume of collected data, which are difficult to analyze and model. In standard models, the researchers define the segments of data and the connections they analyze, based on their experience, physiology, or previous studies, but such an approach, although widely used, bears the risk of losing vital pieces of information, and in some cases, the conclusions are definitely less meaningful than they could be. Methods of data mining can be applied to big data sets of collected biomedical data bases, such as machine learning, various classification trees algorithms, genetic algorithms, nonlinear relationships in complex models, etc. However, information theory methods are also gradually more widely used to establish causal connections in big data sets and to get more insight into the nature of the phenomena described by the biomedical data. The growing interest in such studies is what has inspired this Special Issue of Entropy.

## **Message from the Editor-in-Chief**

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. Entropy is inviting innovative and insightful contributions. Please consider Entropy as an exceptional home for your manuscript.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
