## Fault Diagnosis Method Based on Information Theoretic: From Theory to Applications

Guest Editors:

**Dr. Claude Delpha**

CNRS, CentraleSupélec,  
Laboratoire des Signaux et  
Systèmes, Université Paris  
Saclay, 91400 Orsay, France

**Prof. Dr. Demba Diallo**

CNRS, CentraleSupélec, Group of  
Electrical Engineering of Paris,  
Université Paris Saclay, 91400  
Orsay, France

Deadline for manuscript  
submissions:

**closed (26 August 2021)**

### Message from the Guest Editors

In smart systems, faults are detected at an early stage and classified, and the system lifetime is predicted to optimize maintenance operations. In order to meet these requirements, new monitoring algorithms are continuously developed. These algorithms integrate state-of-the-art signal and data analysis/processing techniques, entropy-based study, statistical learning, and pattern recognition approaches.

This issue will focus on the application of all of these signal and analysis/processing techniques for the health monitoring of complex systems. Particular attention is paid to statistical/entropy-based detection/estimation techniques. Many approaches are concerned with topics such as quantitative approaches with wide and efficient physical modeling, qualitative approaches, and data driven ones. For this issue, either theoretical or applicative works will be considered. Particular attention will be paid to applications in tune with time such as human health, renewable energy based systems, smart grids, vehicular and industrial applications, etc.

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (*Mathematical Physics*)
