Message from the Guest Editor

Dear Colleagues,

Nature-based Solutions (NbS), defined as ‘*solutions that are inspired and supported by nature, which are cost-effective, and simultaneously provide environmental, social and economic benefits and help build resilience*’, should enable decision- and policymakers to cope with extreme wildfires while ensuring biodiversity conservation and the long-term supply of ecosystem services.

The goal of this Special Issue is to identify NbS to the societal challenge of extreme wildfires. We encourage authors to submit their articles to this Special Issue if the paper covers at least two of the three following issues: fire management, biodiversity and/or ecosystem services.
