Omics Analysis in Marine Invertebrate Biology

Guest Editors:

Prof. Dr. Eric Hallerman

Department of Fish and Wildlife Conservation, Virginia Polytechnic Institute and State University, 100 Cheatham Hall, Blacksburg, VA 24061, USA

Prof. Dr. Supawadee Poompuang

Department of Aquaculture, Faculty of Fisheries, Kasetsart University, Chatuchak, Bangkok 10900, Thailand

Deadline for manuscript submissions:

closed (16 October 2023)

Message from the Guest Editors

Dear Colleagues,

The application of genomics, transcriptomics, proteomics, and metabolomics—or omics analyses—across diverse fields has increased rapidly in recent decades. These technologies are increasingly applied to non-model organisms, such as marine invertebrates, to understand molecular mechanisms behind observed phenotypes. The knowledge gained from these studies depends upon rigorous attention to quality across the stages of experimental planning, execution, sample preparation, analysis, and interpretation. We solicit papers that apply omics techniques to expand our knowledge of life history, adaptations. phenotypic plasticity, and projected responses to climate change across diverse marine invertebrate tax. We are especially interested in studies that integrate across biological hierarchy and/or convey the potential and weaknesses of the omics technique applied through careful data analysis and interpretation.

Message from the Editor-in-Chief

Fishes is a multidisciplinary open access journal focusing on reports of original research and critical reviews and synthesis from the broad area of fishes and aquatic animals. The ultimate objective of Fishes is to facilitate the discovery of connections between research areas, advancing science and filling knowledge gaps, and providing solutions for all present and future issues encountered in the sector of fisheries and aquaculture. As Editor-in-Chief, I encourage you to consider Fishes for your scientific papers and would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, and other databases.

Journal Rank: JCR - Q2 (Marine & Freshwater Biology)
