submissions:

**15 January 2024**

### Message from the Guest Editors

Dear Colleagues,

More than two-thirds of the world's forests are dominated by human activities, and the amount of primary forest is in precipitous decline. In Europe, 86 % of the forested area is managed with a different range of intensity. Management can change the forest canopy characteristics, soil properties (temperature profile, heat and water storage, nutrient and carbon stocks), and understory vegetation with significant impacts on carbon, water, and energy fluxes.

Here, we consider primary forests to be forests of native tree species where there are no clearly visible indications of human activities, and the ecological processes are not significantly disturbed.

This Special Issue focuses on carbon (CO<sub>2</sub> and CH<sub>4</sub>), water, and energy fluxes in undisturbed primary forests based on long-term measurements using the eddy covariance technique or chamber method.

Contribution can be related to the following:

- Carbon, water, and energy interactions in forest ecosystems;
- Effects of extreme climatic events on water, carbon cycles and forest functions;
- Impacts and consequences of the main disturbance factors on forest ecosystems.

## Message from the Editorial Board

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

**Journal Rank:** JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
