Laboratory, Madison, WI 53726,  
USA

Deadline for manuscript  
submissions:

**25 February 2024**

### Message from the Guest Editor

Wood utilization is key to ensuring a sustainable future as wood is renewable, abundant, and carbon neutral. In fact, wood sequesters carbon in trees and in manufactured materials, which extends the carbon benefit past the rotation age of the tree. Construction materials represent an important carbon sink, and the goal in the field of wood protection is to prolong the useful service life of these forest products through the use of chemical protectants, durability by design, wood modification or the use of the heartwood of naturally durable species. In North America, building codes typically require chemically treated wood when used in ground contact, when critical to the structure or when difficult to replace, which often results in disposal issues with treated wood waste. Strategies that can remediate treated building materials are still needed to ensure that chemically treated wood has a circular life trajectory. The goal of this Special Issue is to collate current research relating to wood protection strategies, end of life disposal, life cycle assessments and how these aspects contribute to the larger goals of sustainability and carbon sequestration.

## Editors-in-Chief

### Prof. Dr. Timothy A. Martin

School of Forest Resources and Conservation, PO Box 110410, University of Florida, Gainesville, FL 32611-0410, USA

### Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

## Message from the Editorial Board

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

**Journal Rank:** JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
