Message from the Guest Editors

Forests play important roles in purifying environmental pollutants. However, relevant studies involving forest soil remediation appear insufficient. Therefore, it is necessary to gather more knowledge about the potential and capacity of heavy metals in forest soils, in order to construct appropriate forest stands and develop scientific management techniques to rehabilitate forests soils.

This Special Issue includes but is not limited to following topics:

- Transformation and transfer processes of heavy metals, and their bioavailabilities in forest soils;
- Current status and spatial variation of heavy metal pollution, sources, and potential risks of heavy metals in forest ecosystems;
- Ecotoxicological responses and remediation mechanisms of forest organisms;
- Biogeochemical cycle of heavy metals in forest ecosystems;
- Screening of organisms with remediation potential, and genetic improvement of forest trees to enhance phytoremediation capacity;
- The effect of heavy metal pollution on ecosystem processes, such as interspecific competition;
- Contamination control and new management strategies or technologies to remove heavy metals from forest.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Timothy A. Martin

School of Forest Resources and Conservation, PO Box 110410, University of Florida, Gainesville, FL 32611-0410, USA

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
