Dr. Linlin Gao

College of Earth and Environmental Sciences, Lanzhou University, Lanzhou, China

Deadline for manuscript submissions:

18 March 2024

Message from the Guest Editors

As an important part of the ecosystem, especially the forest system, the radial growth of trees is significantly affected by climate changes and their growth status can also reflect ecological changes to a certain extent. Therefore, tree rings have become an important tool to study climate and ecological changes and their relationship. Tree-ring indices (such as width, density and stable isotopes) can directly record climate changes and indirectly reflect the changes in the ecological environment. In addition, tree-ring xylem anatomy (such as the size, density and wall thickness of vessels or tracheids) records climate signals different from traditional tree-ring indices and can explain the relationship between ring and climate physiologically.

This Special Issue encourages the research on the changes in climate and ecology recorded by tree-ring width, density, stable isotopes and wood anatomy, and also accepts the research on the physiological analysis of the relationship between tree ring and climate, the research on the relationship among tree-ring indices, and the work on new methods of tree-ring experimental analysis and data processing.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
