Deadline for manuscript submissions:

closed (30 September 2022)

Message from the Guest Editor

Dear Colleagues,

Molecular genetics is a key scientific area providing tools and applications to study the vast genetic diversity of forest tree species and their complex life histories; dissect complex traits; apply marker-based breeding strategies aiming towards tailored selection of parents and acceleration of breeding cycles; characterize forest genetic resources, in situ conservation networks, and ex situ collections; identify genetic lineages, endangered populations, and untapped genetic resources; and study the genetics/genomics of adaptation to changing environments to mitigate the climate change effects.

This Special Issue aims to publish cutting-edge results from across the globe on the above topics and synthesize the recent knowledge obtained from applying molecular genetics on tree breeding, conservation, and management of forest genetic resources in the face of climate change.

Dr. Evi Alizoti

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
