Prof. Dr. Shuwang Wu

State Key Laboratory of
Radiation Medicine and
Protection, School for
Radiological and Interdisciplinary
Sciences (RAD-X), Soochow
University, Suzhou 215003, China

Deadline for manuscript
submissions:

closed (30 April 2024)

Message from the Guest Editors

Dear Colleagues,

Gel-related research has seen tremendous growth in the past several decades. Higher demands on gel properties and measures for their control arise as gel-based materials are exposed to new interdisciplinary studies and applications. Structures at various length scales have proven to significantly impact the physical and chemical properties of gel materials both in nature and in practice. Therefore, the design of gels with specific molecular functions, network complexities, microstructures and macro-architectures could yield hydrogels with advanced properties in terms of mechanics, diffusivity, sensitivity, adhesion, biocompatibility, and recyclability. Recent developments have shown that by harnessing chemical synthesis and engineering controls, gels could exhibit a multitude of controllable structures that lead to significant enhancement of properties and dynamics that were infeasible with conventional hydrogel designs. This Special Issue is dedicated to the surging studies of structure-property relationships of novel gel materials, with a focus on molecular design, network engineering, and structural controls.

Message from the Editor-in-Chief

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (*Polymer Science*)
