Deadline for manuscript  
submissions:

**20 July 2024**

### Message from the Guest Editor

Dear Colleagues,

"Exploring Heterogeneity in Genome-Wide Association Studies" is a research area that seeks to understand the differences in genetic susceptibility to complex diseases across populations. Genome-wide association studies (GWAS) are widely used to identify disease-associated genetic variants. However, these studies can reveal different results depending on the populations studied, leading to a need for further exploration of heterogeneity. Exploring heterogeneity in GWAS can help identify populations at risk for specific diseases, allowing for earlier diagnosis and intervention and improving precision medicine. This research area aims to identify sources of variability in GWAS results, including differences in sex, ancestry, environmental exposures, and gene–environment interactions, to inform a complete understanding of the genetic architecture of complex diseases.

Dr. Shefali Setia Verma

## Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

**Journal Rank:** JCR - Q2 (*Genetics & Heredity*) / CiteScore - Q2 (*Genetics*)
