Deadline for manuscript submissions:
31 August 2024

Message from the Guest Editors

Pre-hospital care is an important component of health systems, traditionally consisting of emergency medical services providing emergency treatment and conveying patients to emergency departments. This is perhaps best demonstrated by the increasing emphasis on the development of quality indicators specific to pre-hospital care providers, as well as the professionalization agenda in emergency medical services.

We are pleased to invite you to submit to our understanding of the quality of pre-hospital care. Themes include but are not limited to:

Development or evaluation of pre-hospital care pathways;
Definitions of quality and/or quality indicators, including feedback systems for pre-hospital care staff or services to obtain final patient outcomes;
Patient experience or satisfaction with pre-hospital care;
Interventions situated within pre-hospital care setting that aim to improve access to care, patient safety, or effectiveness;
Professional roles and staff training initiatives aimed at improving quality of care;
Collaborative working within the pre-hospital care workforce and across organizational and professional boundaries
