Deadline for manuscript  
submissions:

**31 July 2024**

### Message from the Guest Editors

There is an increasing demand for the effective management of both postsurgical and posttraumatic pain, as well as that related to chronic disease. Nevertheless, in real life, many patients are not receiving satisfactory therapy. The role of primary pain related to central sensitization as well as chronification of acute pain conditions is also of vital importance.

Many interventional therapeutic methods and devices that are well known and already used, as well as new ones, require additional studies to support their indications, contraindications, safety, and effectiveness in pain therapy.

This Special Issue of *Healthcare*, entitled “Regional Anesthesia and Interventional Treatment of Acute and Chronic Pain”, was envisaged to touch upon a wide range of topics from the fields of anesthesia and pain medicine related to the matter in question. I welcome papers on any subject that is appropriate for this Special Issue. Meta-analyses, reviews, and original articles are welcome.

- pain treatment
- interventional pain management
- regional anesthesia
