Deadline for manuscript  
submissions:

**closed (10 November 2021)**

### Message from the Guest Editor

This Special Issue of Healthcare will focus on the impact on the maternal immunity acquired from COVID-19 natural infection or immunization (COVID-19 vaccine) on infants' outcomes. The research topic is focused on (1) maternal factors on the potential influence on immune response during COVID-19 vaccine; (2) risk of COVID-19 infection in breastfed infants versus bovine formula-fed infants; and (3) passive immunity during natural infection and immunization of SARS-CoV-2. This Special issue can include original research and reviews, short reports, opinions from researchers, and epidemiological and animal studies.
