closed (15 March 2022)

Message from the Guest Editor

In the current complex and changing world, compounded by the COVID 19 pandemic, it is of utmost importance that health behavior researchers and scholars engage in inventing and testing newer models and theories that hinge on technological novelty. It is safe to presume that future technological applications furthering health behavior research will certainly include digitalized health-based applications such as social-media-based interventions, mobile based applications, and wearable devices.

The purpose of this Special Issue is to invite health behavior scholars and researchers to contribute to filling the research gap between what has worked in past years and what could be seen in years to come by sharing innovations in methodologies, models, theories, and newer modes of research.
