Deadline for manuscript submissions:

30 June 2024

Message from the Guest Editors

The nephrology speciality is a dynamic, diverse, and holistic practice specialty centred around working with patients and families to assess and address health and offer support and interventions to prevent disease. The care offered by the healthcare team traverses the life cycle and includes patients in the early stages of kidney disease, those presenting with acute kidney injury, others who commence kidney replacement therapy or receive a kidney transplant, and those who follow a supportive and palliative care pathway.

This Special Issue seeks articles (original clinical studies and reviews) related to the quality and safe management of patients with kidney disease including supportive interventions. This invitation is addressed to all healthcare professionals (i.e., physicians, nurses, pharmacists, psychologists, dietitians, physical therapists, occupational therapists, physical and behavioural therapists, social workers) who are involved in the care of patients with kidney disease.
