Deadline for manuscript
submissions:

2 February 2024

Message from the Guest Editors

Dear Colleagues,

Stem cell transplantation (SCT) has emerged as a well-established treatment for various malignant and non-malignant diseases of hematopoietic origin.

In recent years, improvements in transplantation techniques have led to a significant reduction in treatment-related complications. Importantly, mortality rates have declined in recent decades, despite increasing numbers of older patients and those with more comorbidities undergoing allogeneic HSCT.

This Special Issue focuses on the role of SCT in challenging cancer treatment options, covering both basic research and more clinical aspects that may advance our understanding of this intriguing process.

Hematology Reports (ISSN 2038-8330) is an international open access journal on all aspects of the prevention, diagnosis and management of disorders of the blood, as well as related molecular and cell biology, genetics, pathophysiology, epidemiology and controlled trials. *Hematology Reports* publishes reviews, regular research papers (articles), case reports and communications. Our aim is to collect high-quality articles that are of interest and cutting-edge in hematology, to provide an efficient, reliable and guaranteed platform for scholars and readers, and to encourage scientists to publish their experimental and theoretical research in as much detail as possible. Full experimental and/or methodological details must be provided for research articles.

Author Benefits

Open Access:— free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, ESCI (Web of Science), PMC, PubMed, Embase,** and **other databases.**

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 51.7 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the first half of 2023).
