Message from the Guest Editors

Dear Colleagues,

The prognosis suggests that the area of soilless culture will be dramatically increased in the future, both in protected and open field horticulture. This will be associated with the increased use of growing media in nurseries, herbaceous plants, such as vegetables, ornamentals, medicinal and aromatic plants, and some small fruits and woody crops. Soilless cultures are called intensive-sustainable systems. However, are they sustainable or on their way to being sustainable?

Today, solutions are needed to reduce or replace peat, increase nutrient and water use efficiency, and introduce circular waste flows. Using locally available and renewable raw materials, appropriate substrate mixtures, biostimulants, and adapted high techniques, such as Artificial Intelligence and the Internet of Things, could help us to construct a new strategy for cultivating soilless plants. This Special Issue aims to focus on recent progress in solutions to increase the sustainability of production in intensive horticulture without compromising yield and quality.

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (*Horticulture*) / CiteScore - Q2 (*Horticulture*)
