Message from the Guest Editor

Dear Colleagues,

The use of plant protection products is an essential part of horticulture. This reduces the competitive growth of weeds and the development of many diseases. Irrespective of the dosage method, the active substances in plant protection products reach the soil in varying amounts. Once in the soil, xenobiotics undergo various processes including sorption, migration, leaching, degradation, and biotransformation. Their presence in the soil environment undoubtedly affects the functioning of the ecosystem. They may affect changes in the population of microorganisms living in the place of entry of the compound, but they also influence the bioavailability of micro- and macro-elements, seed germination, the development of new plants, and the condition of bushes and fruit trees.

This SI will focus on evaluating the effects of residual herbicide compounds in soil on seed germination and crop development. In addition, very important aspects are the penetration of active substances into plants and the evaluation of changes in basic metabolic parameters, which make it possible to determine the level of oxidative stress caused by the presence of a chemical in the plant.

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (*Horticulture*) / CiteScore - Q2 (*Horticulture*)
