Message from the Guest Editor

Dear Colleagues,

There is no doubt that viticulture is a high-input culture, and not just in the vineyard. The high use of pesticides worldwide, fertilization, and frequent driving of tractors leave their mark. In addition, climate change poses new problems for wine-growing regions, not only in the cultivation but also the vinification of wines. Critical consumers are increasingly questioning the sustainability of the entire production chain and making this a key factor in their purchasing decisions.

The aspects of environmental pollution must be taken into account during production.

The purpose of this Special Issue on “Sustainable Viticulture of Grape and Wine Quality: State of the Art 2022” is to present the whole production chain; wine production as well as table grape and raisin production should be considered. Innovative articles on soil management, plant protection, grape quality, and winemaking are welcome in this Special Editio

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank: JCR - Q1 (*Horticulture*) / CiteScore - Q2 (*Horticulture*)
