Message from the Guest Editors

Dental caries is the most prevalent Non-Communicable Disease (NCD) and affects all age groups across the life course. Dental caries creates very significant personal, social, and economic burdens all over the world and presents the largest numerical impact across oral health. Caries disease is preventable and shares common risk factors with other non-communicable diseases. By controlling these risk factors, it is possible to improve not only oral health but also general health. In addition to the economic cost of treating dental caries in its advanced stages, it causes pain and other health problems with impact in people's quality of life. To deal with the pandemic of caries, it is necessary to join forces in both clinical and research aspects. Likewise, the implementation of multidisciplinary health education programs based on scientific evidence is necessary to allow clear, accurate and applicable protocols in both diagnosis and treatment at all stages of disease.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
