submissions:

30 November 2024

Message from the Guest Editor

Road traffic safety is considered to be the most common health determinant associated with the transport sector and considers the prevention of serious injuries or deaths on the road. Moreover, road traffic collisions are among the most serious threats to public safety and injury prevention. Driver safety is influenced by numerous factors, varying from those pertaining to the human factor to those affecting traffic regulation and infrastructure design or the vehicle itself.

A reduction in crashes, injuries and deaths on the roads can be achieved through certain approaches. Several behavioral changes can help to significantly reduce the number of road traffic-related accidents, including speed control, respecting and following the road traffic rules and signs, as well as avoiding unsafe behaviours—driving under the influence of alcohol or other substances, or using a mobile phone while driving. Additionally, it is essential to identify high-risk drivers before collisions occur.

This Special Issue is an opportunity for researchers to publish valuable results in road traffic safety, behavior, prevention and control.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
