Message from the Guest Editor

Approximately 3 in 5 deaths are attributable to four non-communicable diseases (NCDs): cardiovascular disease, cancer, chronic lung diseases and diabetes. Chronic diseases and multimorbidity are much more prevalent in marginalised communities. Health services worldwide are coping with increased demands and increased costs of providing care with three-quarters of health expenditure directly. Reversing trends, for example, in obesity rates and the rise in lung cancer rates due to tobacco smoking among women, which has now overtaken breast cancer in many developed countries, requires new evidence-based approaches to prevention, including tailored interventions with tested implementation strategies carried out in partnership with individuals and communities. Development, implementation and evaluation of community-engaged research with participants as equal partners has potential to advance the understanding of researchers in understanding community priorities and improve the ability of communities to address their own health needs. Papers addressing these topics are invited for this Special Issue, especially those combining a high academic standard with a practical focus.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
