Message from the Guest Editors

Dear colleagues,

The need for a multilevel research agenda into migration, population mobility and health is well recognized. However, mobile and migrant populations remain under-represented in public health research; factors such as social isolation, language barriers and mistrust often framing populations as ‘hard to reach’. Where research exists, the focus has largely been to define the ‘problem’; comparatively little research has identified ‘what works’ or tested or scaled up interventions to address disparities. This Special Issue invites theoretical and empirical contributions from diverse disciplines on:

- development and evaluation of public health responses to improve health and socio-economic outcomes for mobile and migrant populations;
- culturally appropriate and decolonizing models of public health and migration research;
- innovative methods for improving the quality of research involving mobile and migrant populations;
- insights from mobile and migrant populations highlighting gaps, priorities and solutions;

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
