Deadline for manuscript submissions:

closed (31 March 2023)

Message from the Guest Editors

With the advancement of urbanization, land use change has become a global research hotspot. Regional sustainable development is an extremely complex systemic project that requires the concerted efforts of many parties. Rationalizing the use of limited land resources to achieve sustainable regional development is a major issue facing the country or region at present, especially under the influence of multiple factors, such as the COVID-19 and geopolitical conflicts. Solving the conflicts and problems of land use, changing the traditional production model, and promoting institutional reform are the keys ways to promote the coordinated development of population, land, and environment, as well as to improve the sustainable development of the region.

Potential topics include, but not limited to: land use change, regional sustainable development, cultivated land protection, urban expansion and urban-rural integration development.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase,

GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
