closed (1 October 2023)

Message from the Guest Editors

Dear Colleagues,

Obesity and diabetes are the most common causes of atherosclerotic vascular disease of the coronary, cerebral and peripheral arteries of the lower extremities, arterial hypertension, dyslipidemia and consequent heart failure in various types of cardiomyopathies with a preserved, mildly reduced or reduced ejection fraction of the left ventricle.

Obesity and diabetes per se represent a major global health problem. If we count the number of patients with related cardiovascular comorbidities, then we must be aware of the complexity of the disease and the number of patients we encounter in daily clinical practice. In order to be aware and act, we need additional knowledge and understanding of the connection between obesity and diabetes mellitus and cardiovascular diseases.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
