Message from the Guest Editors

Dear Colleagues,

Cancer-related challenges could trigger a negative or positive reaction, with different intensities depending on individual characteristics. Various factors, such as coping strategies, perceived social support, and socioemotional abilities, could contribute to and mediate the relationship between the impact of trauma and the occurrence of positive or negative psychological outcomes.

The available evidence seems to show that maladaptive coping strategies, low levels of perceived social support, and reduced socioemotional skills can bring the individuals to experience greater distress, whereas adaptive coping strategies, adequate perceived social support, and preserved socioemotional abilities can result in positive psychological outcomes in patients with cancer.

In this Special Issue, papers investigating the abovementioned factors in patients with cancer are invited. Original research articles, reviews, method papers, and case reports are welcome.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
