Message from the Guest Editors

The environment in which we live, work, and spend our time can have a direct impact on our health. Contextual factors, like social and economic features of neighborhoods, have been shown to have a significant impact on an array of health outcomes, including mortality, chronic conditions, mental health, injuries, violence, and other important health indicators. For example, unsafe neighborhoods can affect our overall wellbeing by denying us the opportunity to have physical activity and spend time outdoors. On the other hand, walkable neighborhoods, access to playgrounds, and affordable, nutritious food can encourage healthy behaviors and lifestyles.

This Special Issue of IJERPH focuses on the links between space, place, and health outcomes. We are particularly interested in studies that advance the understanding of the causal mechanisms linking environments and health outcomes or associated behavioral risk factors.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
