### Message from the Guest Editors

In recent decades, we have witnessed a noticeable and evident change in human–animal relationships. We have gone from a utilitarian vision of this relationship to a more respectful vision of otherness and animal welfare. Consequently, the way of relating to and contacting animals has also changed which, particularly for pets, provides for a closer and often symbiotic coexistence. Furthermore, some animal species, such as dogs, are involved in activities that are now considered “working”, and involve a very close coexistence between owner and animal.

However, the zoonotic risks derived from these close human–animal interactions, which constitute the rules of interacting and living with animals (pets in particular), are still little explored, and are underestimated. This Special Issue will address this gap.

Papers highlighting any aspect of infectious (bacterial, viral, or parasitic) zoonoses in this field are welcome and will be taken into consideration for the publication. We encourage authors of research or review articles to submit their material to this Special Issue.

an Open Access Journal by MDPI

## Editor-in-Chief

**Prof. Dr. Paul B. Tchounwou**

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
