Message from the Guest Editors

Construction is a significant industry in both developed and developing countries. It is a major contributor of GDP, a major employer, and a major client that supports other industrial sectors. The industry also permeates society by providing essential buildings and infrastructure. Despite its significance, poor health and safety is still a major concern in the construction industry globally. Developing countries are facing unique challenges that hinder the implementation of health and safety in their construction industries. Research in this area is emerging and has become more and more important due to the rapid economic growth and the infrastructure needs in these countries. Without appropriate interventions, this growth can lead to higher human losses, an unacceptable outcome that cannot be justified by any means. This Special Issue is entitled “Towards Safer Construction in Developing Countries” because it aims to capture state-to-the-art research that is able to bridge the gap between theories and practice and to facilitate tangible improvements in construction health and safety performance in developing countries.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
