Wearable and Ubiquitous Technology-Based Algorithms for Analytics in Healthcare

Guest Editors:

Dr. Alan Godfrey

Department Computer Science, Northumbria University, Newcastle-upon-Tyne NE1 8ST, UK

Dr. Jessilyn Dunn

Pratt School of Engineering, Duke University, Durham, NC 27708, USA

Deadline for manuscript submissions: closed (31 March 2021)

Message from the Guest Editors

Low-cost wearable and ubiquitous sensing technologies may provide a pragmatic key to unlocking the next level of diagnosis support systems. They could provide scalable solutions that provide insightful habitual data of an individual beyond the confines of a clinic. Such data are complex given the heterogeneity of possible testing environments and how individuals perform the activities of daily living. Intelligent systems with smart algorithms must interpret the data in a robust manner to ensure that the derived outcomes are valid and reliable. Moreover, the outcomes must be sensitive to the research hypothesis/question and therefore grounded in their clinical application.

Today, various algorithms involving a plethora of approaches, such as feature extraction and/or machine learning, have been applied. The application of such novel methods to the healthcare sector can aid clinicians in making an accurate and timely diagnosis as well as in providing individualised management of the patient from data gathered beyond the clinic.

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation, Richard Dixon Research Center, Morgan State University, 1700 E. Cold Spring Lane, Baltimore, MD 21251, USA Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
