Message from the Guest Editor

All disciplines with an interest in children's health and development need to understand children's play. Children's play has been studied in areas as diverse as cognition, physical activity, educational achievement, the development of myopia, and child-friendly cities. Although children's play is acknowledged as an important contributor to lifelong health and development, concerns have been raised about reductions in opportunities available to children, particularly for outdoor play involving risk.

The aim of this Special Issue is to bring together evidence from a wide range of disciplines to advance the understanding of the contributions of play to children's health and development. High-quality primary studies, secondary data analyses, and reviews with a focus on children (birth to 18 years) and/or adults within the play context are welcome.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
